HEONE

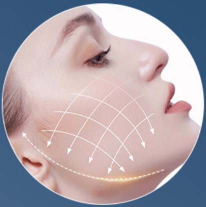
Maria Trading
House of Aesthetics

2 IN 1

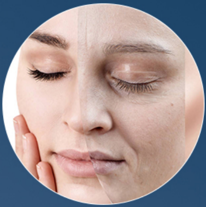
Microneedling

Microneedle+multipolar RF
diversified treatment options, excellent results

Function

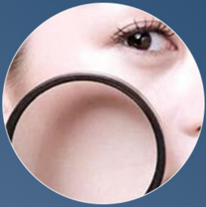


Lifting and firming
of the skin



Anti-aging

skin rejuvenation

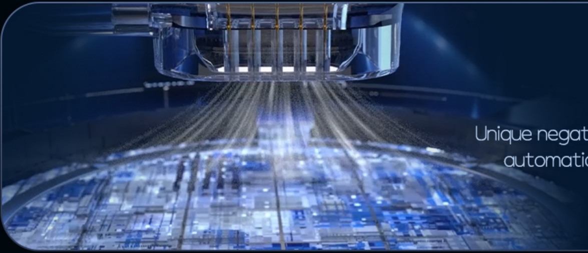


Removal of acne marks

Stretch marksand wrinkles

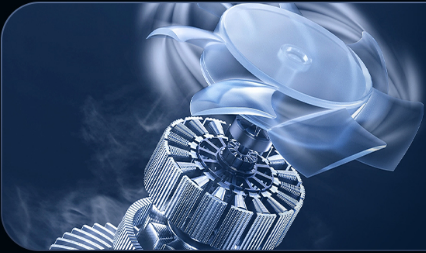
Skin reconstruction

Product advantages



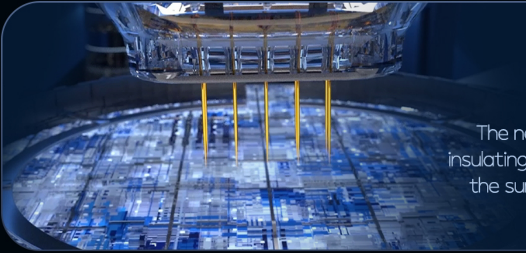
01

Unique negative pressure automatic adsorption technology



02

Korean motor, stable operation and safe treatment



03

The needle column has an insulating coating to protect the surface from damage

One-time use Sterile needle
64P ☐ 25P ☐ 10P ☐
STERILE EO
Scan code area

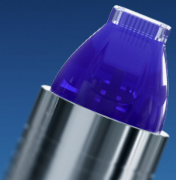
04

Medical grade packaging, sterile and hygienic

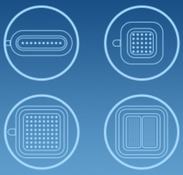
Handle Introduction

With negative pressure handle + without negative pressure handle

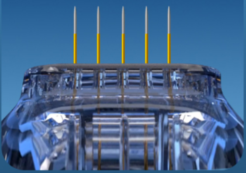


Imported accessories

Operable in multiple parts



Safe and reliable



Negative pressure adsorption technology

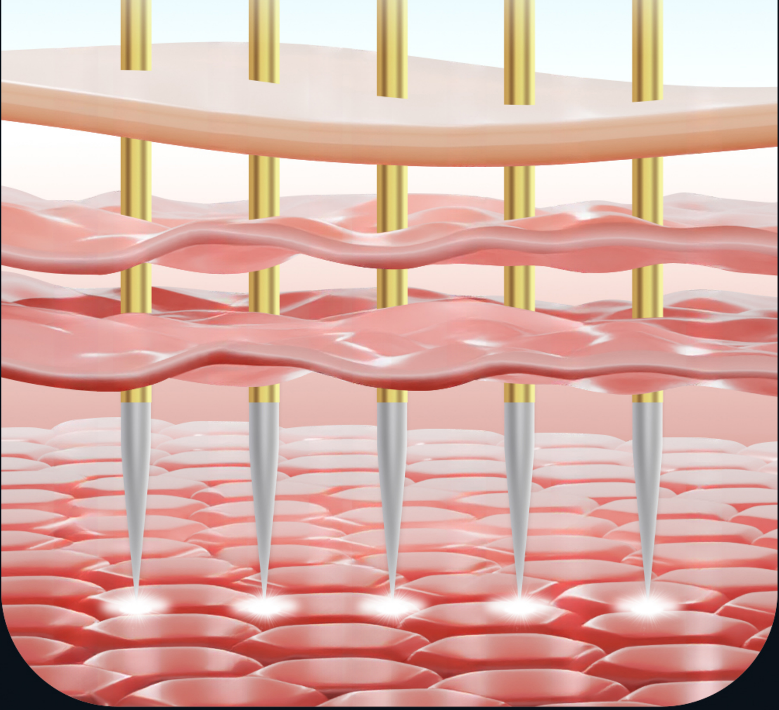
Fast treatment

Selling points of the

whole machine

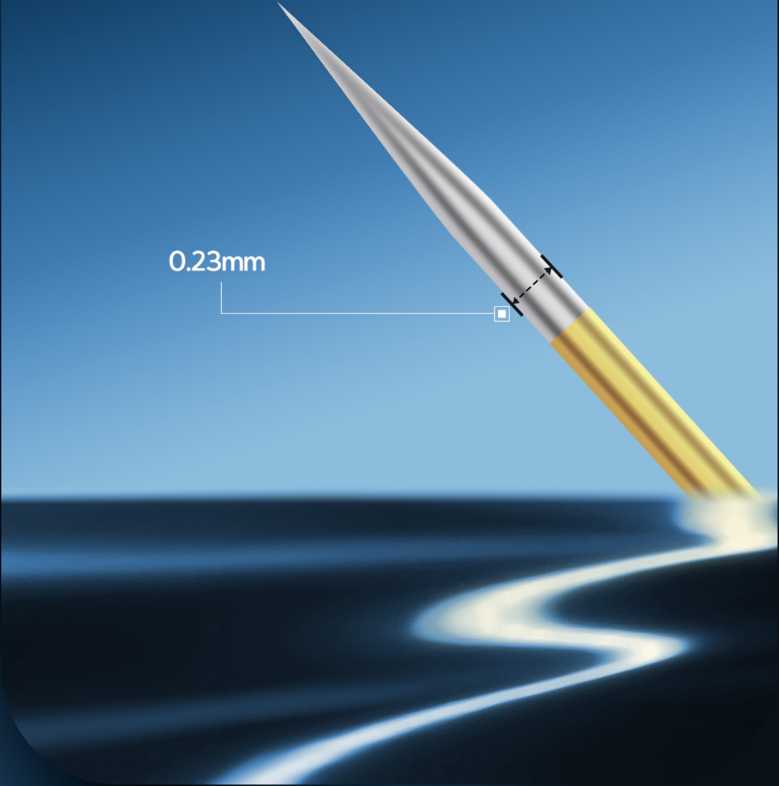
Insulation coating

The needle column is coated with an insulation coating, which can concentrate the RF energy on the needle tip and protect the surface from damage.



Smaller wound

The diameter of the needle is 0.23mm. Compared with the common needles on the market, 0.23mm can make the wound smaller and the recovery period shorter



Safe operation

The needle is equipped with an adsorption tube, which sticks closely to the skin and automatically removes the needle, making the treatment efficient and easy for novices to operate.

Convenient transportation

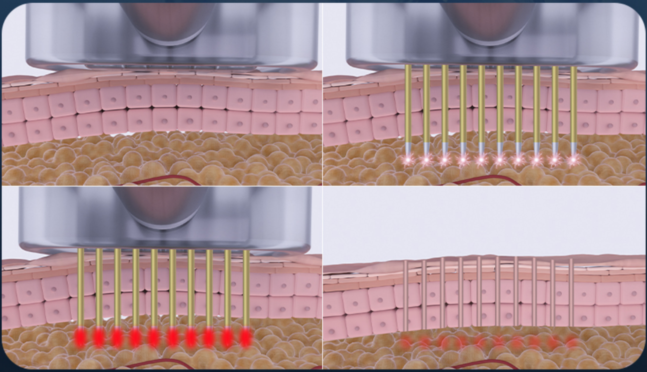
The outer shell of the machine is made of metal, which is very sturdy, ensuring that the machine is not damaged during transportation and facilitating heat dissipation.

Machine Principle

The mechanical stimulation of microneedles, combined with the biological effect and thermal stimulation generated by radio frequency, releases radio frequency energy through the needle tip, reaching a high temperature of 75°, forming a thermal coagulation point under the skin, thereby promoting collagen regeneration and reorganization. Together, they stimulate the skin's self-repair system, promote metabolism, improve microcirculation, and start the regeneration and rearrangement of subcutaneous tissues such as collagen and elastic fibers;

The penetration of microneedles opens up the quick absorption channel of the skin, making it easier for beauty ingredients to enter the skin;

The radio frequency energy emitted by the microneedle tip can selectively destroy the hair follicles, sebaceous glands, and apocrine glands, inhibit inflammatory responses, and activate the body's own anti-inflammatory repair system.



Parameter

Screen	12.1 inch LCD

Size	61*57*120cm
RF frequency	2 MHZ
Speed	1-10 level optional
Pressure Level	1-10 level optional
Needle depth	0.1-8mm(Adjustable)
Needle coating	Insulated
Tips	M-10,M-25,M-64,M-0
Working mode	Automatic/Manual
Handle	Negative pressure handle Quick needle handle
