

Nicotinamide Adenine Dinucleotide (NAD) is one of the most essential molecules in our body, it is a coenzyme found in each of our living cells.

NAD is the cornerstone to maintaining healthy internal organs and a healthy neurological system. This IV therapy is a holistic, all-natural solution for those suffering from chronic disease and age-related health issues, and can boost overall wellness in healthy individuals. Through a standard drip, IV delivers NAD directly to your bloodstream, bypassing the gut for full absorption. For NAD, IV infusions are preferred over orally ingested alternatives because NAD is hard to process through the gastrointestinal tract.

What Does NAD Do?

First, it turns nutrients into ATP (the energy currency of each cell). Second, it works with proteins to carry out essential biological processes such as:

- DNA repair
- Mitochondrial function
- Maintaining chromosomal integrity
- Gene expression
- Epigenetic modifications
- Posttranslational modifications
- Calcium signalling

Benefits of NAD:

- 1) General Wellness
- 2) DNA repair AND repairs damaged cells
- 3) Protects Brain Cells AND Improves Mental Health
- 4) Anti-Aging
- 5) Muscle Protection AND Reduce pain
- 6) Addiction Recovery
- 7) Enhances Athletic performance AND Weight loss

NAD IV Infusion Therapy may be good for people with:

- Alzheimer's disease
- Parkinson's disease
- Heart disease
- Diabetes
- Mitochondrial dysfunction
- Multiple sclerosis
- Fibromyalgia
- Anxiety/depression
- Chronic fatigue
- Memory/concentration issues

FUSION APOTHECARY

PHARMACY & COMPOUNDING LAB, UAE

What you may experience after our NAD IV treatments:

- Reduced fatigue/higher energy levels
- Sharper memory/overall mind function
- Pain/inflammation relief
- Better metabolism
- Improved moods
- Less anxiety/depression
- Faster recovery from injury/exercise
- Higher endurance/better physical performance
- Feeling of youthfulness
